

# Optimize® LV

Soybean

## New Concentrated Formulation of Optimize® Soybean Inoculant.

Optimize® LV is a retailer-applied dual-action inoculant that delivers the benefits of a specially selected *Bradyrhizobium japonicum* inoculant along with LCO (lipochitooligosaccharide) technology – helping to improve your crop's potential by enhancing nutrient availability.

With Optimize LV, the plant does not need to wait for the LCO signal as it is delivered on the seed, potentially reducing the time required for this process to occur naturally and therefore, accelerating nodulation and nitrogen fixation to the young crop.

Optimize LV has the same biological actives as Optimize ST, with a new lower application rate at 1.5 oz/cwt.

### Benefits of Optimize LV

**Greater opportunity for the development of nitrogen-fixing nodules with LCO**

**Lower application rate means more space on seed for other seed treatments**

**Enhanced nutrient availability, which supports root and shoot growth**

**Broad seed treatment compatibility with 220-day on seed stability with additional extender\* for key seed treatments, otherwise 120-day on seed stability**

### Optimize LV Application

Optimize LV is applied to soybean seed by retailers. Please contact your seed retailer to order.

Optimize LV for soybean is available in a liquid formulation, in two sizes to treat either 80 or 400 units per box.

Package size and contents	Amount of seed treated/individual case	
2 x 0.686 L Optimize LV liquid, plus 0.4 L Liquid Additive	80 units	4,000 lb
6.9 L Optimize LV liquid, plus 2 L Liquid Additive	400 units	20,000 lb
