

TagTeam® BioniQ®

Pea · Lentil

We Have The Technology.

Five Biological Actives for... Stronger Roots...Faster Nodulation... Better Yields.

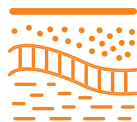

TagTeam® BioniQ® increases yield and performance over a wide range of geographic locations and field conditions.

TagTeam BioniQ is the next generation of granular inoculants that combines five biological actives to maximize your pulse crop performance. A specially selected *Rhizobium* inoculant and the proven performance of LCO (lipochitooligosaccharide) technology are utilized to provide improved nodule formation and increased nitrogen fixation. TagTeam BioniQ contains the phosphate-solubilizing benefits of the *Penicillium bilaiae* fungi as well as the biologicals, *Bacillus amyloliquefaciens* and *Trichoderma virens* for increased nutrient availability.

Benefits of TagTeam BioniQ

Increased yield and return on investment - see more at BATResults.ca

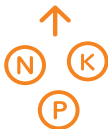

Performance in a variety of soil conditions and types

Improved nodule formation and nitrogen fixation

Greater opportunity for earlier nodulation with LCO

Improved availability of nitrogen, phosphate and potassium

Earlier, more uniform maturity

TagTeam BioniQ Granular Inoculant Application

TagTeam BioniQ granular should be applied directly with the seed in the seed row using a granular tank for application. Application rates vary according to row spacing (refer to label).

Package size	18 kg (39.68 lb) bag		454 kg (1000.9 lb) bag	
	Row spacing	lb/ac	ac/bag	lb/ac
6 in	5.5	7.2	5.5	182.0
7 in	4.7	8.4	4.7	213.0
8 in	4.1	9.7	4.1	244.1
9 in	3.6	11.0	3.6	278.0
10 in	3.3	12.0	3.3	303.3
12 in	2.7	14.7	2.7	370.7
15 in	2.2	18.0	2.2	455.0
