

Copper Sulphate 10XL

Granular Micronutrient

Cu (25.2%) S (12%)

Cu

COPPER

- Copper is essential for cell wall strength, specifically in the anther where the viability of pollen formation is crucial to the yield of the plant.
- Copper is important for chlorophyll production, protein synthesis, respiration, standability and the efficient use of nitrogen.

S

SULPHUR

Sulphur has many critical functions in plants including:

- Formation of chlorophyll essential for photosynthesis.
- The majority of sulphur in crops is as a constituent of the three S-containing amino acids (cysteine, cystine and methionine), which are the building blocks of protein.
- It is important for yield, crop quality and essential for enzyme activation, nitrogen metabolism and in oilseeds it is crucial for oil synthesis.

Application:

- To be used in blending fertilizers for soil application.
