

Boron (15%)

Granubor is a refined granular sodium only borate product.

- Granubor is compatible with all fertilizer blends.
- Granubor is designed to meet the crop's demands, providing both immediate and extended availability of boron during the growing season.
- The ore is dissolved in water and re-crystallized, removing any impurities and creating an extremely pure natural product.
- Sodium based boron is nearly 100% water soluble.
- Boron is essential for active root growth, cell division and plant strength.
- Boron is critical to yield optimization due to its role in pollination, pod production, seed and fruit set.

Granubor is OMRI Listed for organic use.

Application

7 lbs of product = 1 lbs actual.

**If granubor is seed placed a maximum of 7 lbs. per acre of product should be used.*

Granubor can be applied in the following methods:

- Broadcast
- Banded
- Seed placed

To determine the best rate and method of applying sufficient boron for optimum yields, growers should know:

- The relative boron needs for their crop.
- The water soluble available boron supply in the soil.
- The soil type of the field.
